Stress . . .

When a human is attacked with an edged weapon, massive physiological and psychological changes take place to prepare the body to survive. These changes will dramatically affect the ability for individuals to perform skills that were easily executed when no stress is present. The Shocknife® uses electrical stimulation to fool the brain into believing the body has been cut without actually breaking the skin. If you are not currently using the Shocknife®, ask yourself....

How REAL is your edged weapon TRAINING?

Edged Weapon Facts

- 24% of all serious injuries experienced by crime victims were from edged weapon attacks (only 13% were from firearms)
- 569,990 edged weapon attacks occur in the United States each year (1,561 per day)
- Number of people routinely carrying knives in North America has increased by 92% since 1980
- Every house in North America has some type of edged weapon
- · Most popular improvised weapons in prisons are designed to cut or pierce

Your Edged Weapon Training

Is your training knife capable of inducing the necessary fear and stress required for realistic training? If not, you are not adequately preparing your people to survive edged weapon attacks. When it comes to training, your people deserve the best and most advanced training tools in the world. For edged weapons training, that tool is the Shocknife® SK-2.

The Shocknife SK-2The Shocknife® SK-2 (patented) is an ingenuous balance between safety and performance. The composite blade is incapable of cutting. It delivers a localized shock that causes pain, but not serious injury or incapacitation. The SK-2 has four voltage settings. At its highest setting the SK-2 delivers up to 7,500 volts and less than 1 milliamp. The Shock Activator Switch allows the user to control when the

The SHOCKNIFE® Advantage

ADVANTAGE #1 -

Biofeedback Tool

Set the adjustable SK-2 shock level to LOW and the blade of the knife becomes your instructor. It uses a mild painless shock to provide feedback when your technique needs correction. Save time, energy, and money by training more efficiently.

ADVANTAGE #2 -

Stress Exposure Training

A real knife attack creates a feeling of panic causing your body to respond with the "fight or flight" syndrome. That same acute stress can now be replicated during training by setting the SK-2 shock level to EXTREME. At this level the knife sparks and growls, ready to bite with each attack.

ADVANTAGE #3 -

Cut Location Indicator

The SK-2 delivers a powerful shock upon contact allowing the trainee to recognize both WHERE and WHEN they were exposed during the attack. The shock will even arc through clothing! Unlike marking knives there is no messy marking compound to clean up after training.

ADVANTAGE #4 -

Stress Inoculation Tool

True Stress Inoculation Training involves an incremental exposure to a stressor. The SK-2's four different shock level settings range from LOW to EXTREME, making it the only training tool in the world that can truly claim the ability to provide incremental stress training. The varied settings allow everyone that trains with the SK-2 to advance at their own pace.

ADVANTAGE #5 –

Realistic Research

For the first time ever, the SK-2's ability to create fear reponses will allow researchers the opportunity to simulate and study realistic edged weapon attacks. Are you or your instructors still teaching the 21 foot rule? Try replicating the study using the SK-2, the results will truly SHOCK you!

ADVANTAGE #6 – **Reduced L<u>iability</u>**

Are you using the training knife that will best prepare your officers or soldiers to survive an edged weapon attack? The average settlement for failure to provide adequate training is \$1.2 million dollars. The SK-2 is the only training knife in the world that can replicate the same mental and physical responses necessary for realistic training.

*Online Safety Monitor Certification is available for agencies conducting training with the SK-2.

Training Knife Comparison	Moci	PURE	MAD	SHOOMS	Jan Santhe
